

B₆ Complex

Now with Metafolin® L-5-MTHF

INTRODUCED 1993

What Is It?

B₆ Complex is an exceptional combination of B vitamins, including vitamins B₁, B₂, B₃, B₅, B₆, B₁₂, biotin, and folic acid (as Metafolin® L-5-MTHF), all of which are provided in their optimal bioavailable and functional forms. This formula offers the wide ranging support of B-Complex Plus with added vitamin B₆ for enhanced support for cardiovascular, nerve and metabolic system health.*

Features Include

- Vitamin B₆ (pyridoxine HCl and pyridoxal 5' phosphate), supporting amino acid metabolism, nervous system health, and neurotransmitter (i.e. GABA and serotonin) synthesis, which studies have reported may help promote menstrual comfort. Furthermore, pyridoxine supports healthy red blood cells by participating in hemoglobin synthesis and some studies indicate it supports wrist nerve comfort.*
- Vitamin B₁ (thiamine HCl), processing carbohydrates, fat, and protein via its coenzyme form of thiamine pyrophosphate (TPP). Vitamin B₁ is required to form adenosine triphosphate (ATP), the key source of energy for the body. Thiamine also promotes neural health.*
- Vitamin B₂ (riboflavin and riboflavin 5' phosphate), metabolizing nutrients and participating in electron transport to form ATP. Riboflavin is an integral part of fatty acid catabolism or β -oxidation and helps convert folic acid and vitamin B₆ to their active states.*
- Vitamin B₃ (niacinamide and inositol hexaniacinate), supporting cardiovascular health by mediating healthy lipid and carbohydrate metabolism.*
- Vitamin B₅ (calcium pantothenate), supporting cardiovascular health. Pantothenic acid is vital in the healthy production, transportation, and breakdown of lipids. Furthermore, this B vitamin promotes the production of the neurotransmitter acetylcholine.*

- Vitamin B₁₂ (methylcobalamin), supporting healthy nerve cell activity and DNA replication. Vitamin B₁₂ is a vital component of the methionine synthase pathway, which along with folic acid and vitamin B₆ supports healthy homocysteine metabolism and S-adenosylmethionine (S-AdoMet) production.*
- Folic acid, promoting the production of healthy DNA and chromosomes. Adequate folate status is critical for nucleic acid synthesis and neurotransmitter synthesis. At the molecular level, the main function of folate is to donate methyl groups in key biochemical reactions occurring in blood cells, neurons, the vasculature and many other tissues. It is provided in this formula as Metafolin®, the naturally occurring universally metabolized form of folate. Metafolin® is chemically identical to the active folate metabolite, 5-methyltetrahydrofolate (L-5-MTHF). L-5-MTHF is the predominant, naturally occurring form of folate in food. Through bypassing several enzymatic activation steps, it is directly usable by the body and provides all of the benefits of folic acid regardless of functional or genetic variations. In conjunction with vitamins B₁₂ and B₆, folic acid helps to support healthy homocysteine metabolism. Additionally, this B vitamin is important for the growth and reproduction of red and white blood cells.*
- Biotin, acting as a coenzyme for the metabolism of fat, carbohydrates and protein.*

Uses For B₆ Complex

These B vitamins play important roles in nearly all of the physiological systems in the body. Some of the key supportive roles include the maintenance of muscle tone in the GI tract, the functioning of the nervous system, and the integrity of skin, hair, and the liver. Furthermore, these

compounds are essential for hemoglobin formation, nerve impulse transmissions, mood, hormone synthesis, and energy metabolism. With enhanced B₆, this formula especially promotes healthy cardiovascular, nerve and metabolic functions.*†

What Is The Source?

Pure Encapsulations B₆ Complex formula contains:

Vitamin B₁ (thiamine HCl): synthetic

Vitamin B₂ (riboflavin): corn dextrose fermentation

Niacinamide and Inositol hexaniacinate: synthetic

Vitamin B₅ (calcium pantothenate): synthetic

Vitamin B₆ (pyridoxal HCl): synthetic

Vitamin B₁₂ (methylcobalamin): corn dextrose fermentation

Folic acid (Metafolin[®], L-5-MTHF): synthetic

Biotin: synthetic

Vitamin C (ascorbyl palmitate) is derived from corn dextrose fermentation and palm oil.

Metafolin[®] is a registered trademark of Merck KGaA, Darmstadt, Germany.

Recommendations

Pure Encapsulations recommends 1-2 capsules per day, in divided doses with meals.

Are There Any Potential Side Effects Or Precautions?

At this time, there are no known side effects or precautions. If pregnant or lactating, consult your physician before taking this product.

Are There Any Potential Drug Interactions?

Folic acid may adversely interact with chemotherapeutic drugs.

B₆ Complex

each vegetable capsule contains  V 0

pyridoxine HCl (B ₆)	250 mg
pyridoxal 5' phosphate (activated B ₆).....	10 mg
thiamine HCl (B ₁)	100 mg
riboflavin (B ₂).....	5 mg
riboflavin 5' phosphate (activated B ₂).....	10 mg
niacinamide	100 mg
inositol hexaniacinate (no-flush niacin)	10 mg
pantothenic acid (calcium pantothenate) (B ₅)	100 mg
methylcobalamin (B ₁₂)	400 mcg
folate (as Metafolin [®] , L-5-MTHF).....	400 mcg
biotin	400 mcg
vitamin C (as ascorbyl palmitate)	15 mg

1-2 capsules per day, in divided doses, with meals.
